Hipo e Hiperplasia epitelial

Hipoplasia e Hiperplasia epitelial

- Controlado por las fuerzas de cizallamiento, exfoliativas, del cierre del párpado superior.
- En el queratocono, a los lados del cono, el epitelio alcanza de 60 a 100 μm , compuesto por 7 a 12 capas de células.
- En casos más notables, el epitelio hiperplásico alcanza más de 20 células y 200 μm de grosor.

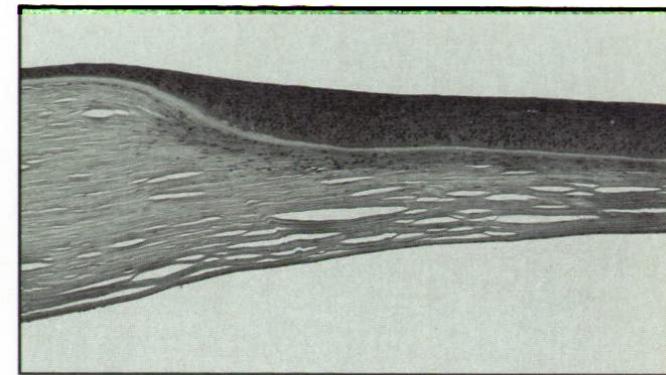

FIGURE 7: Chronic herpes simplex virus keratitis with severe focal stromal loss. Thickened epithelium roughly approximates the smooth anterior corneal curvature in an area of deep stromal loss. Bowman's membrane is seen beneath the CEH. Chronic inflammation persists in the anterior stroma (hematoxylin and eosin, original magnification $\times 50$).

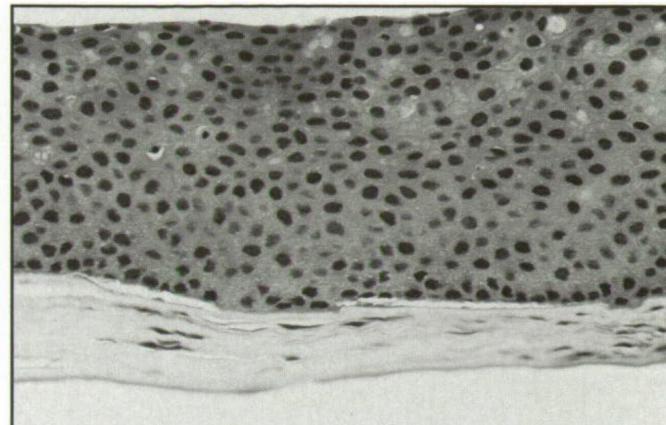

FIGURE 3: The keratoconus with severe stromal ectasia shown in Figure 2. Higher magnification shows that hyperplastic epithelium constitutes nearly 80% of the corneal thickness in the ectatic zone. Bowman's mem-

ISSN 1414-431X

Maintenance of the corneal epithelium is carried out by germinative cells of its basal stratum and not by presumed stem cells of the limbus

2- Control de Miopía con Ortho-k
ó
Ortho-k para Control de Myopia

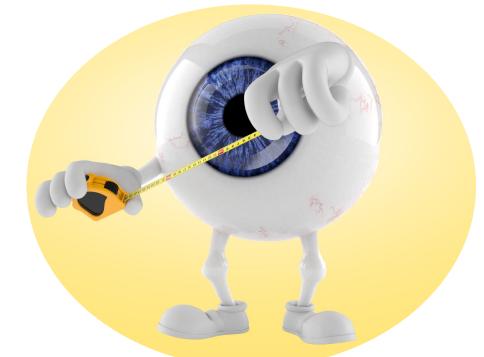

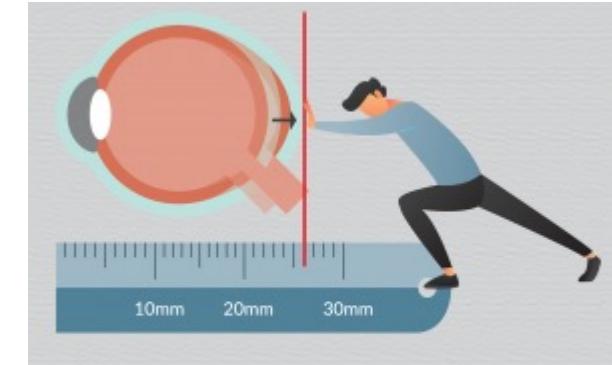

Feliz Aniversario Orthokeratology

Naciste en 1962

Fuiste creada para corregir vision
y no has cambiado nada

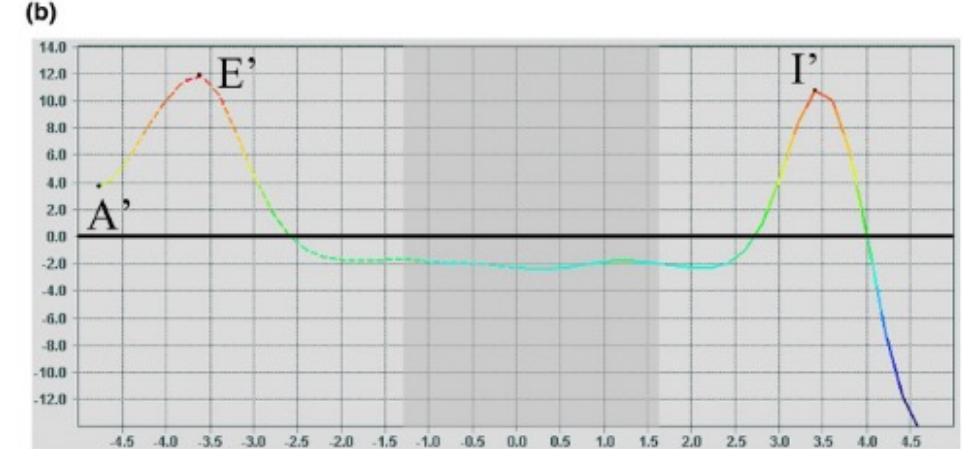

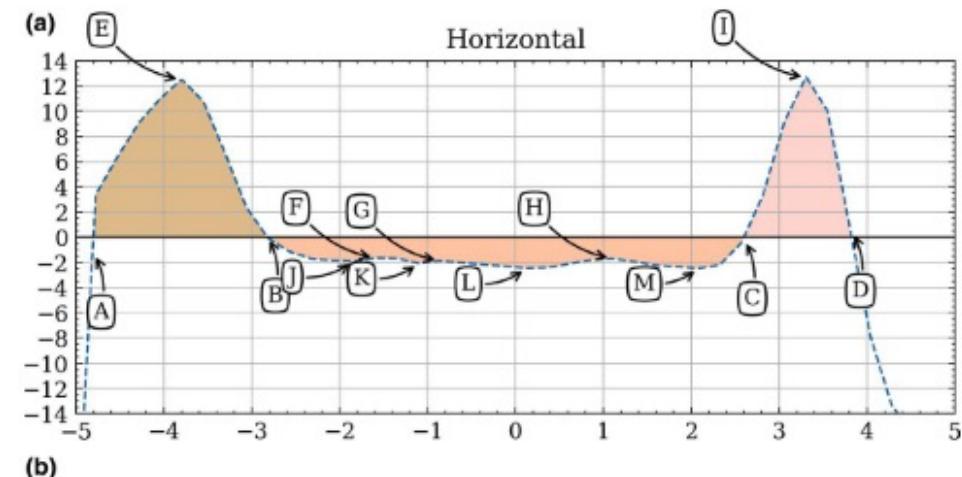

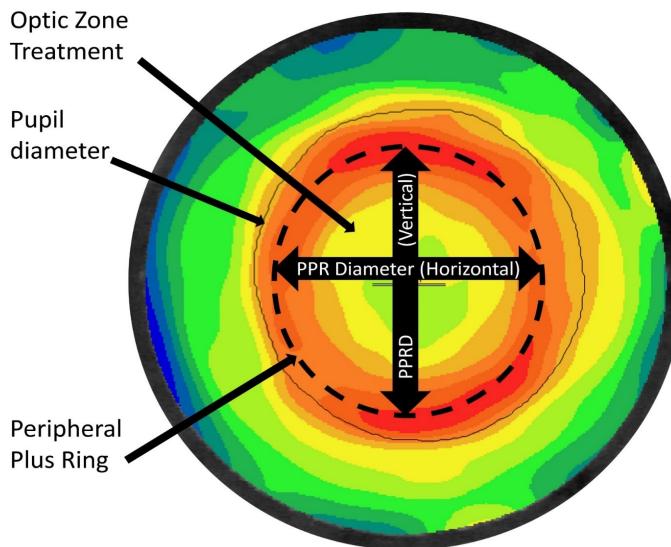

La Orto-k tiene efectos secundarios: *Frenar la Progresión de la miopía*

1. Se acepta un freno del 50% en Longitud Axial
2. Sabemos que es variable: Entre un 20 y un 100%
3. Depende de:
 - Edad
 - Miopía Inicial
 - Etnia
 - Baja/Media/Rápida Progresión
 - Y La Óptica: **Forma de la Zona Óptica y Diametro**

La zona Optica de Tratamiento funciona mejor:

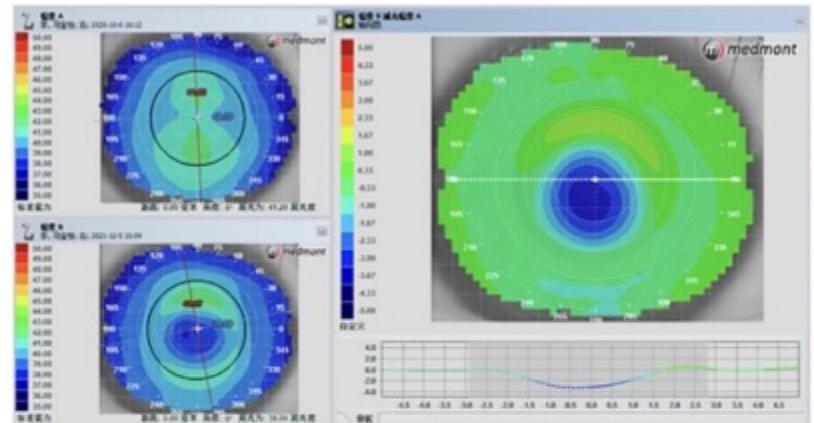

1. Descentralizada
2. Pequeña (en la zona pupilar)
3. Asférica (Gradient Power)

Cumulative Absolute Reduction in Axial Elongation (CARE)

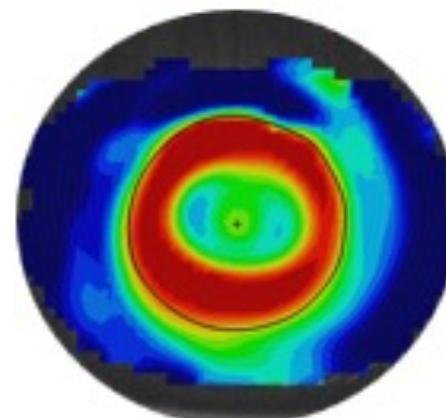

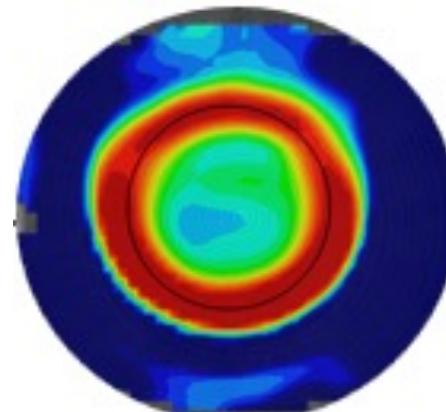

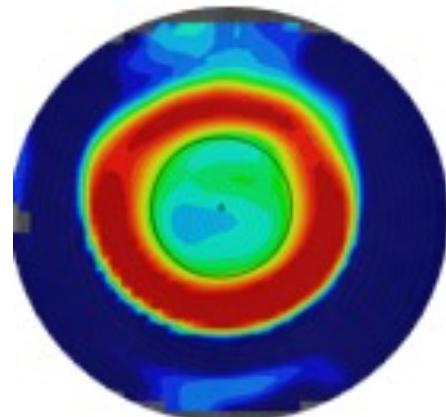

Grupo control gafas monofocal:
 0.28 ± 0.17^1 (0.37^2 ; 0.24^3)

$BOZD > 5,00$ mm = $0,12$ mm/year
 $BOZD \leq 5,00$ mm = $0,20$ mm/year

% Control de miopía:
 $BOZD > 5,00$ mm = **42%**
 $BOZD \leq 5,00$ mm = **71%**

El Cambio de paradigma

*1-Las LC de OK actuales son para
Corrección de la Visión, y como efecto
secundario frenan la miopía.*

*2-Los nuevos diseños son para el cuidado
de la miopía y como efecto secundario
corrigen la visión.*

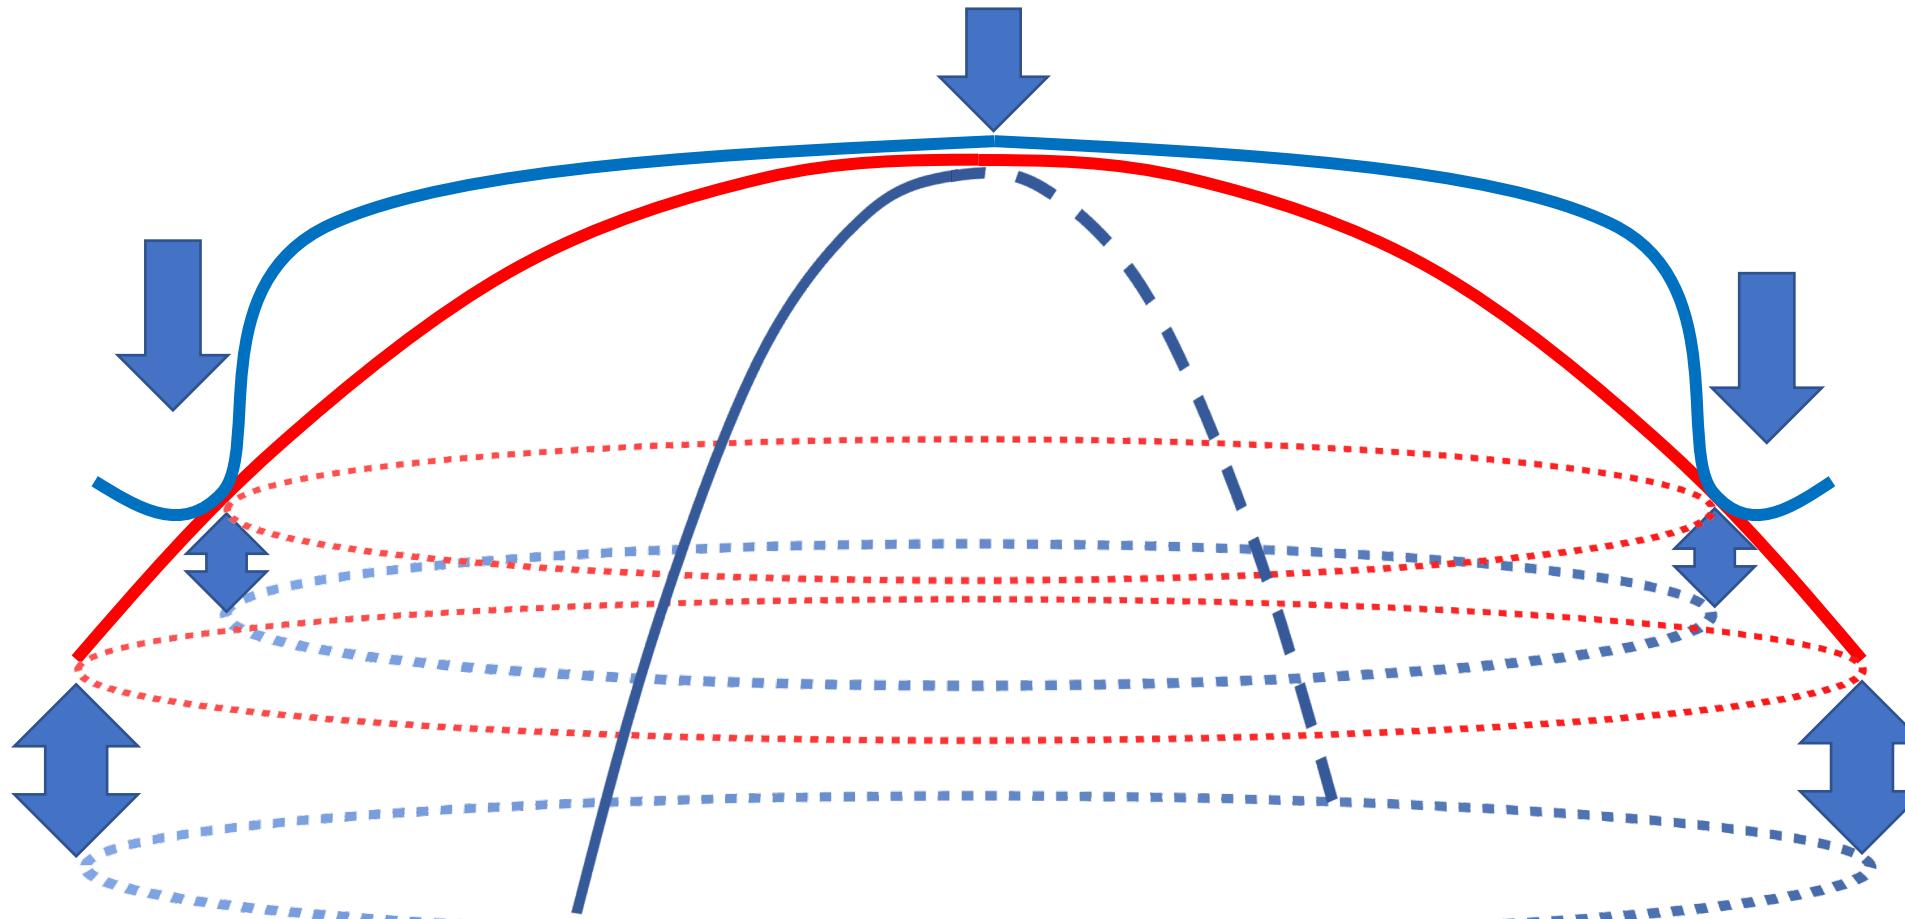

3-Astigmatismo

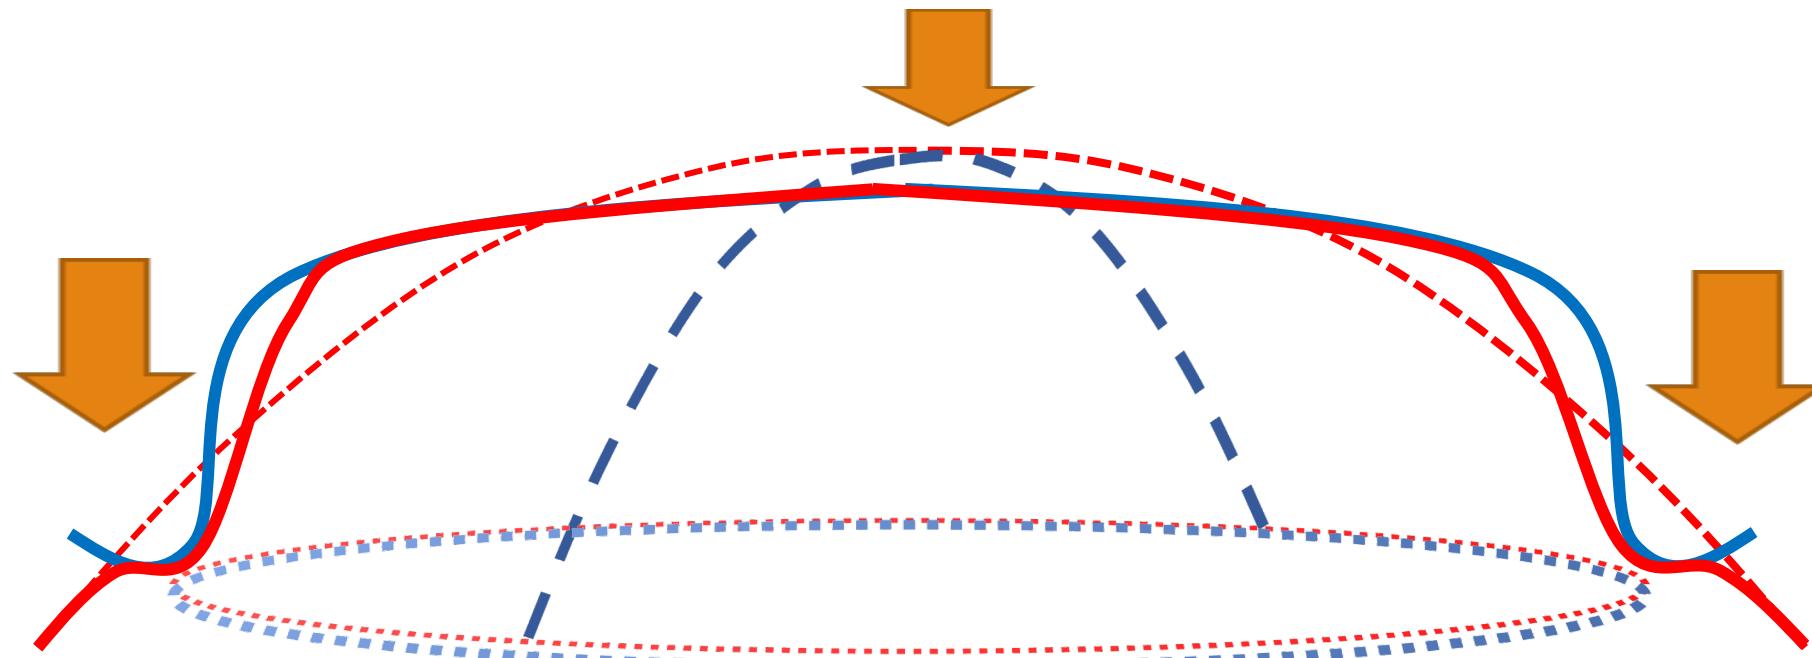

*“Se corrigen mejor astigmatismos horizontales
Los oblicuos o internos no son posibles”*

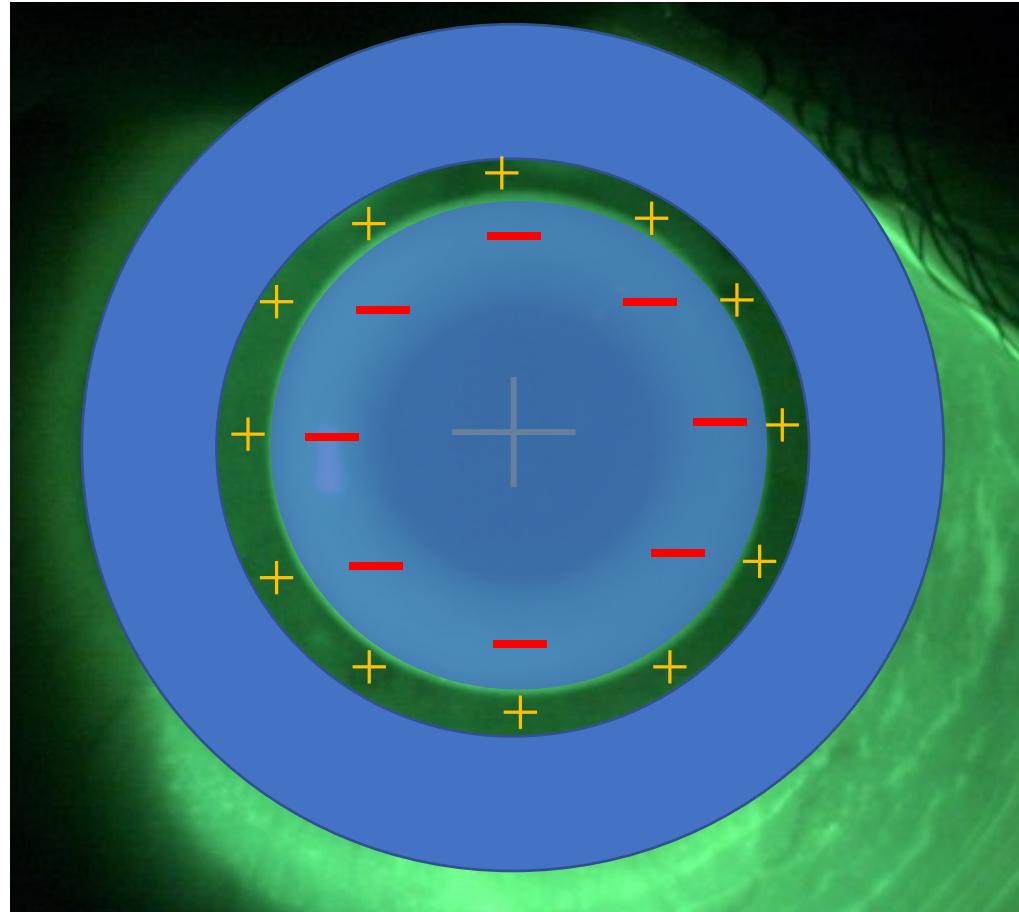

Los límites de lente esférica en cornea tórica

Los límites de lente esférica en cornea tórica

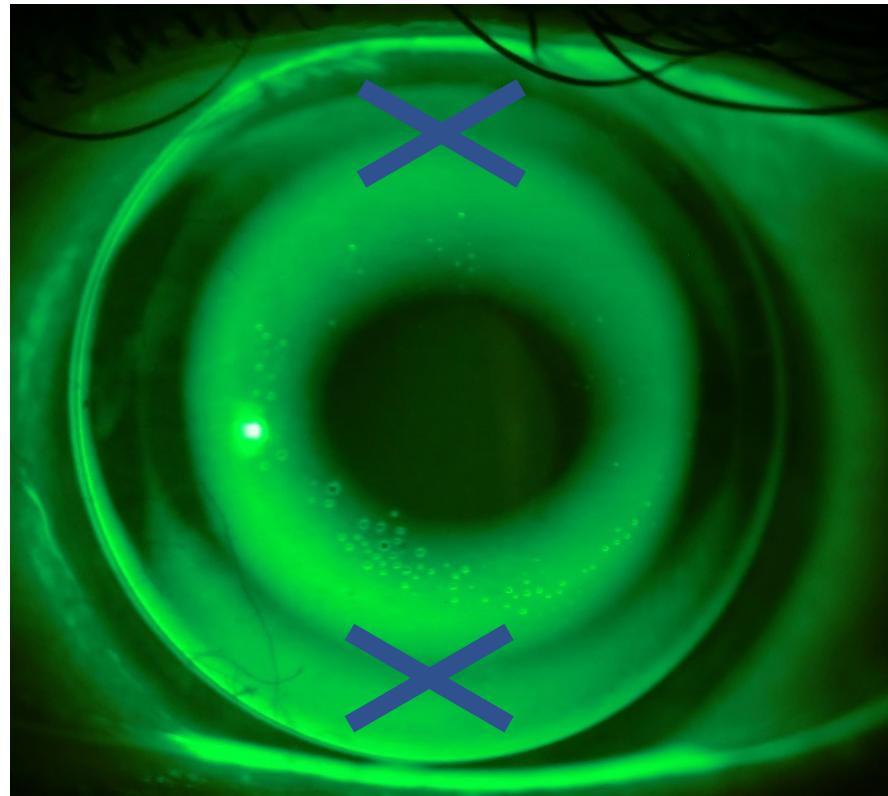

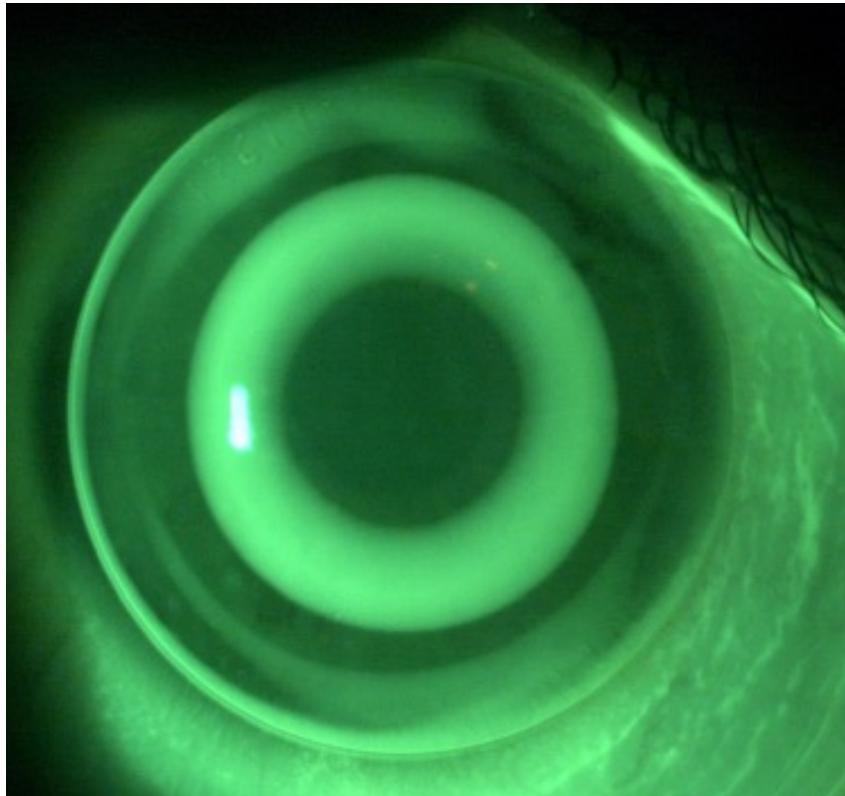

Los límites de lente esferica en cornea tórica

Controlar la zona de sellado

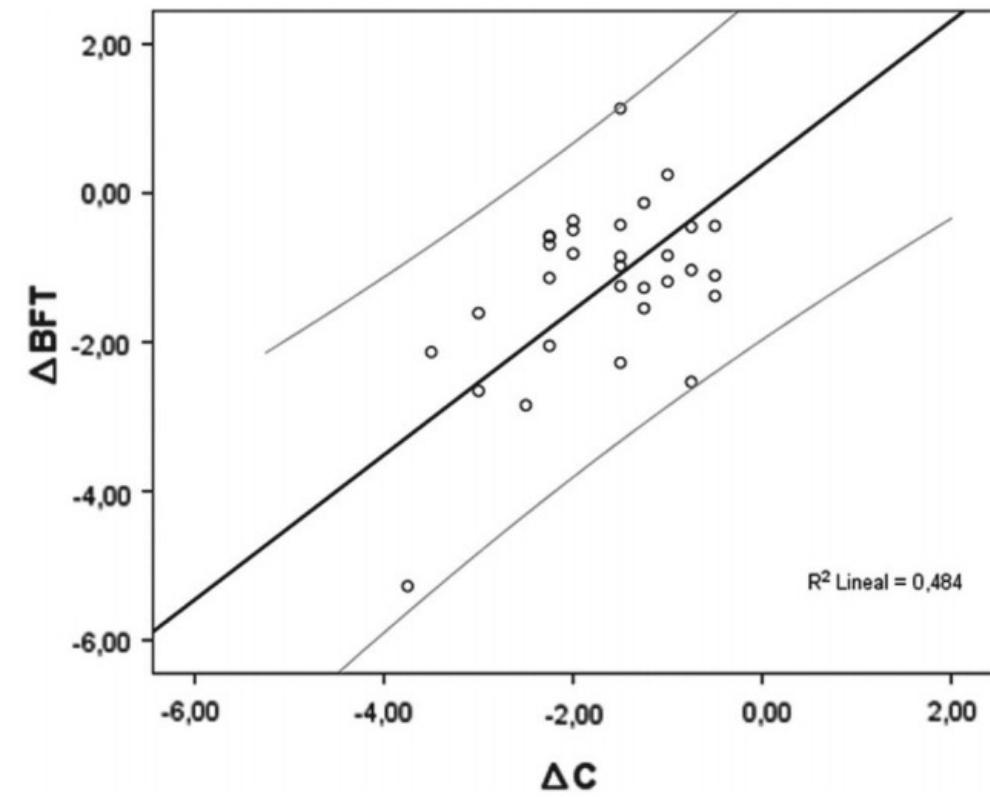

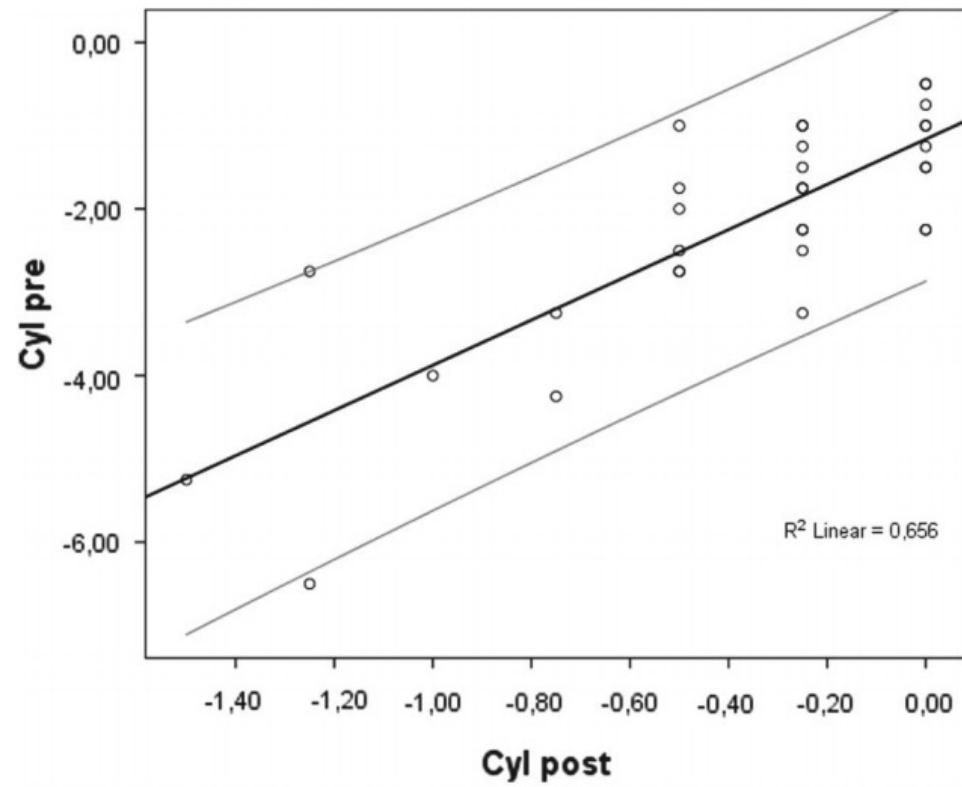

Zona de sellado

Los
límites de
lente
tórica

Una zona óptica esférica corrige solo un 85% del astigmatismo refractivo

El diseño óptico es tórico en todas las curvas. Incluida la zona óptica

- **Radio meridiano plano =**
- Keratometria plano + Esfera + Factor de compresión
- **Radio en meridano curvo =**
- Keratometria plano + Esfera + Factor de compresión

Objetivo: Corrección total del astigmatismo y la esfera

Lo que nunca te contaron de la ortho-k
